

Looking for a nameplate that can withstand the most challenging environment?

## Introducing Aluscreen

Valve tag

Identification label

Warning sign

Faceplate

Unlike standard screen printing which imprints images on the surface of a plate, Aluscreen technology screens the ink directly into the pores of the aluminum. The plate is then sealed so the image is permanent and can survive even the harshest environmental conditions.

## ScanPlast is Western Canada's sole supplier of Aluscreen products

We design and manufacture Aluscreen products for a wide range of uses such as nameplates, ID labels, instructional panels, danger signs, faceplates, valve tags and many more. Aluscreen products can also be engraved and machined, making the list of industrial applications virtually endless.

### Aluscreen properties:

- Chemical and solvent resistant
- Corrosion, rust and saltwater resistant
- UV and fade resistant
- Extreme high & low temperature resistant
- High pressure water and air resistant

### Standard Aluscreen plate thicknesses: 0.030", 0.050" & 0.080"

### Standard Aluscreen colors\*

- black
- blue
- yellow
- red
- green
- pink

\* Custom colors are available upon request.

### Put Aluscreen to the test.
